

Mission

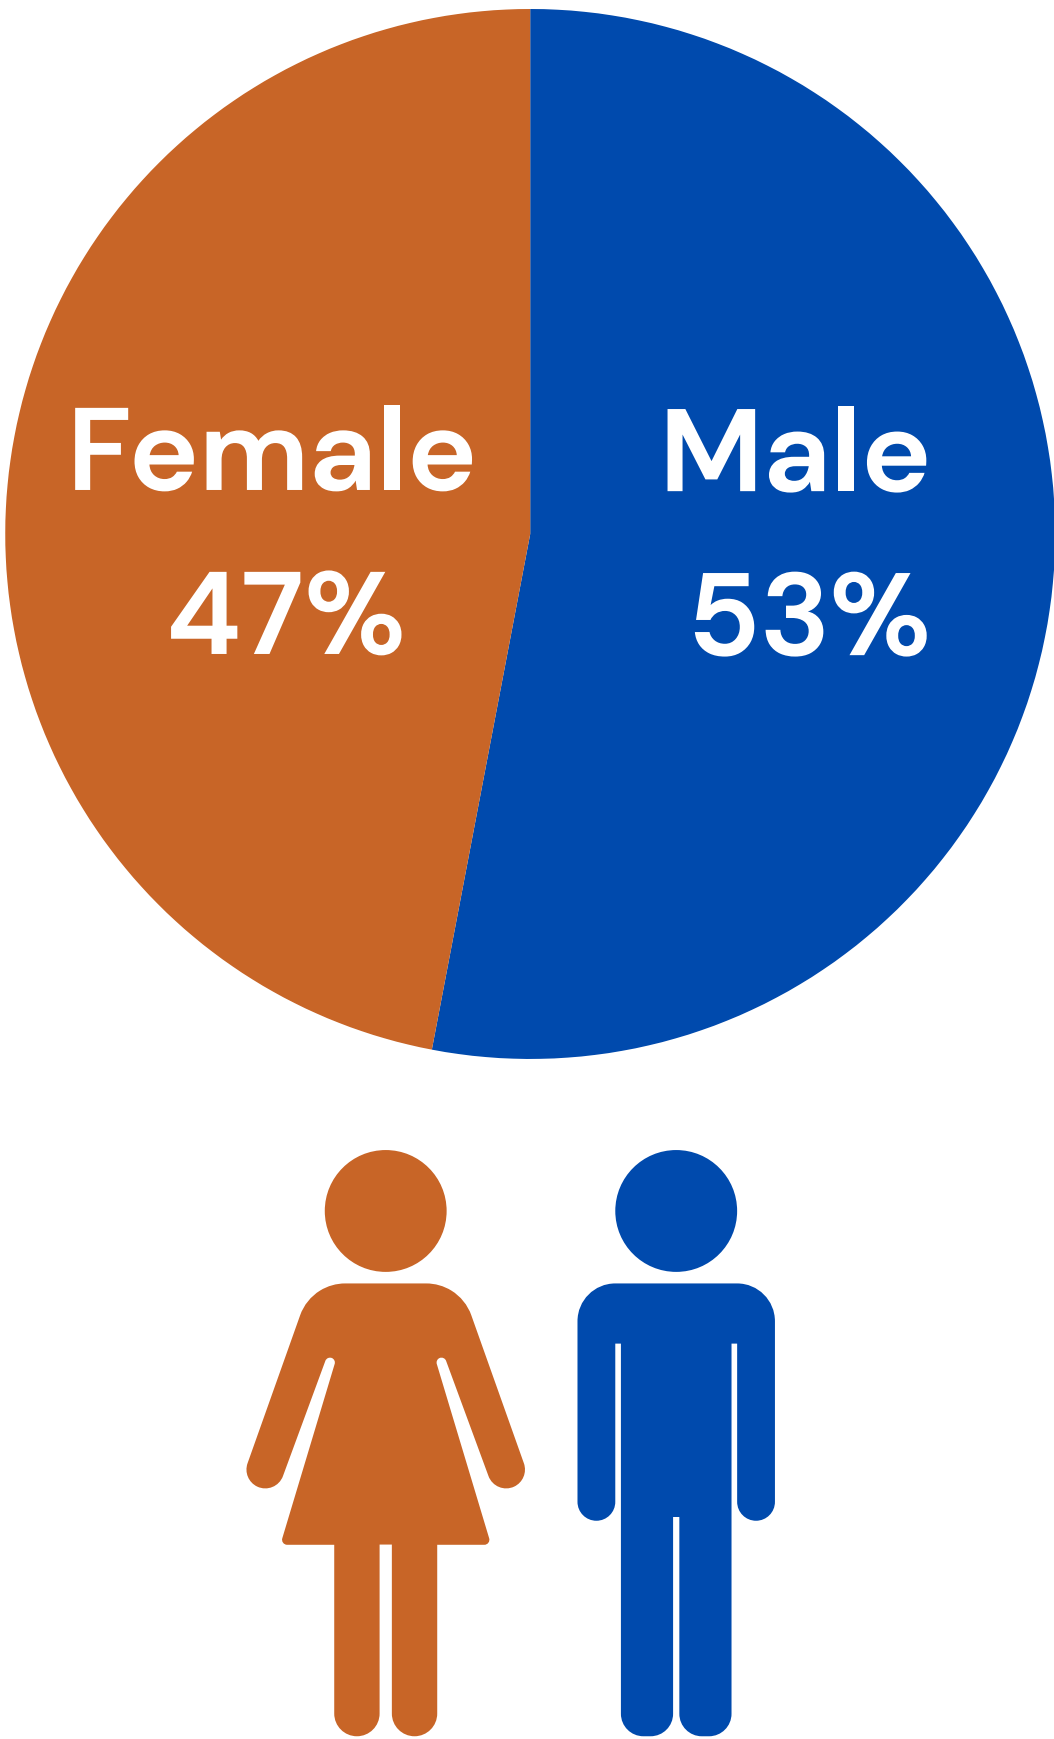

“Our MISSION is to rebuild lives by rehabilitating patients to a higher functional level, reconnecting them with the community and improving their quality of life.”

Vision

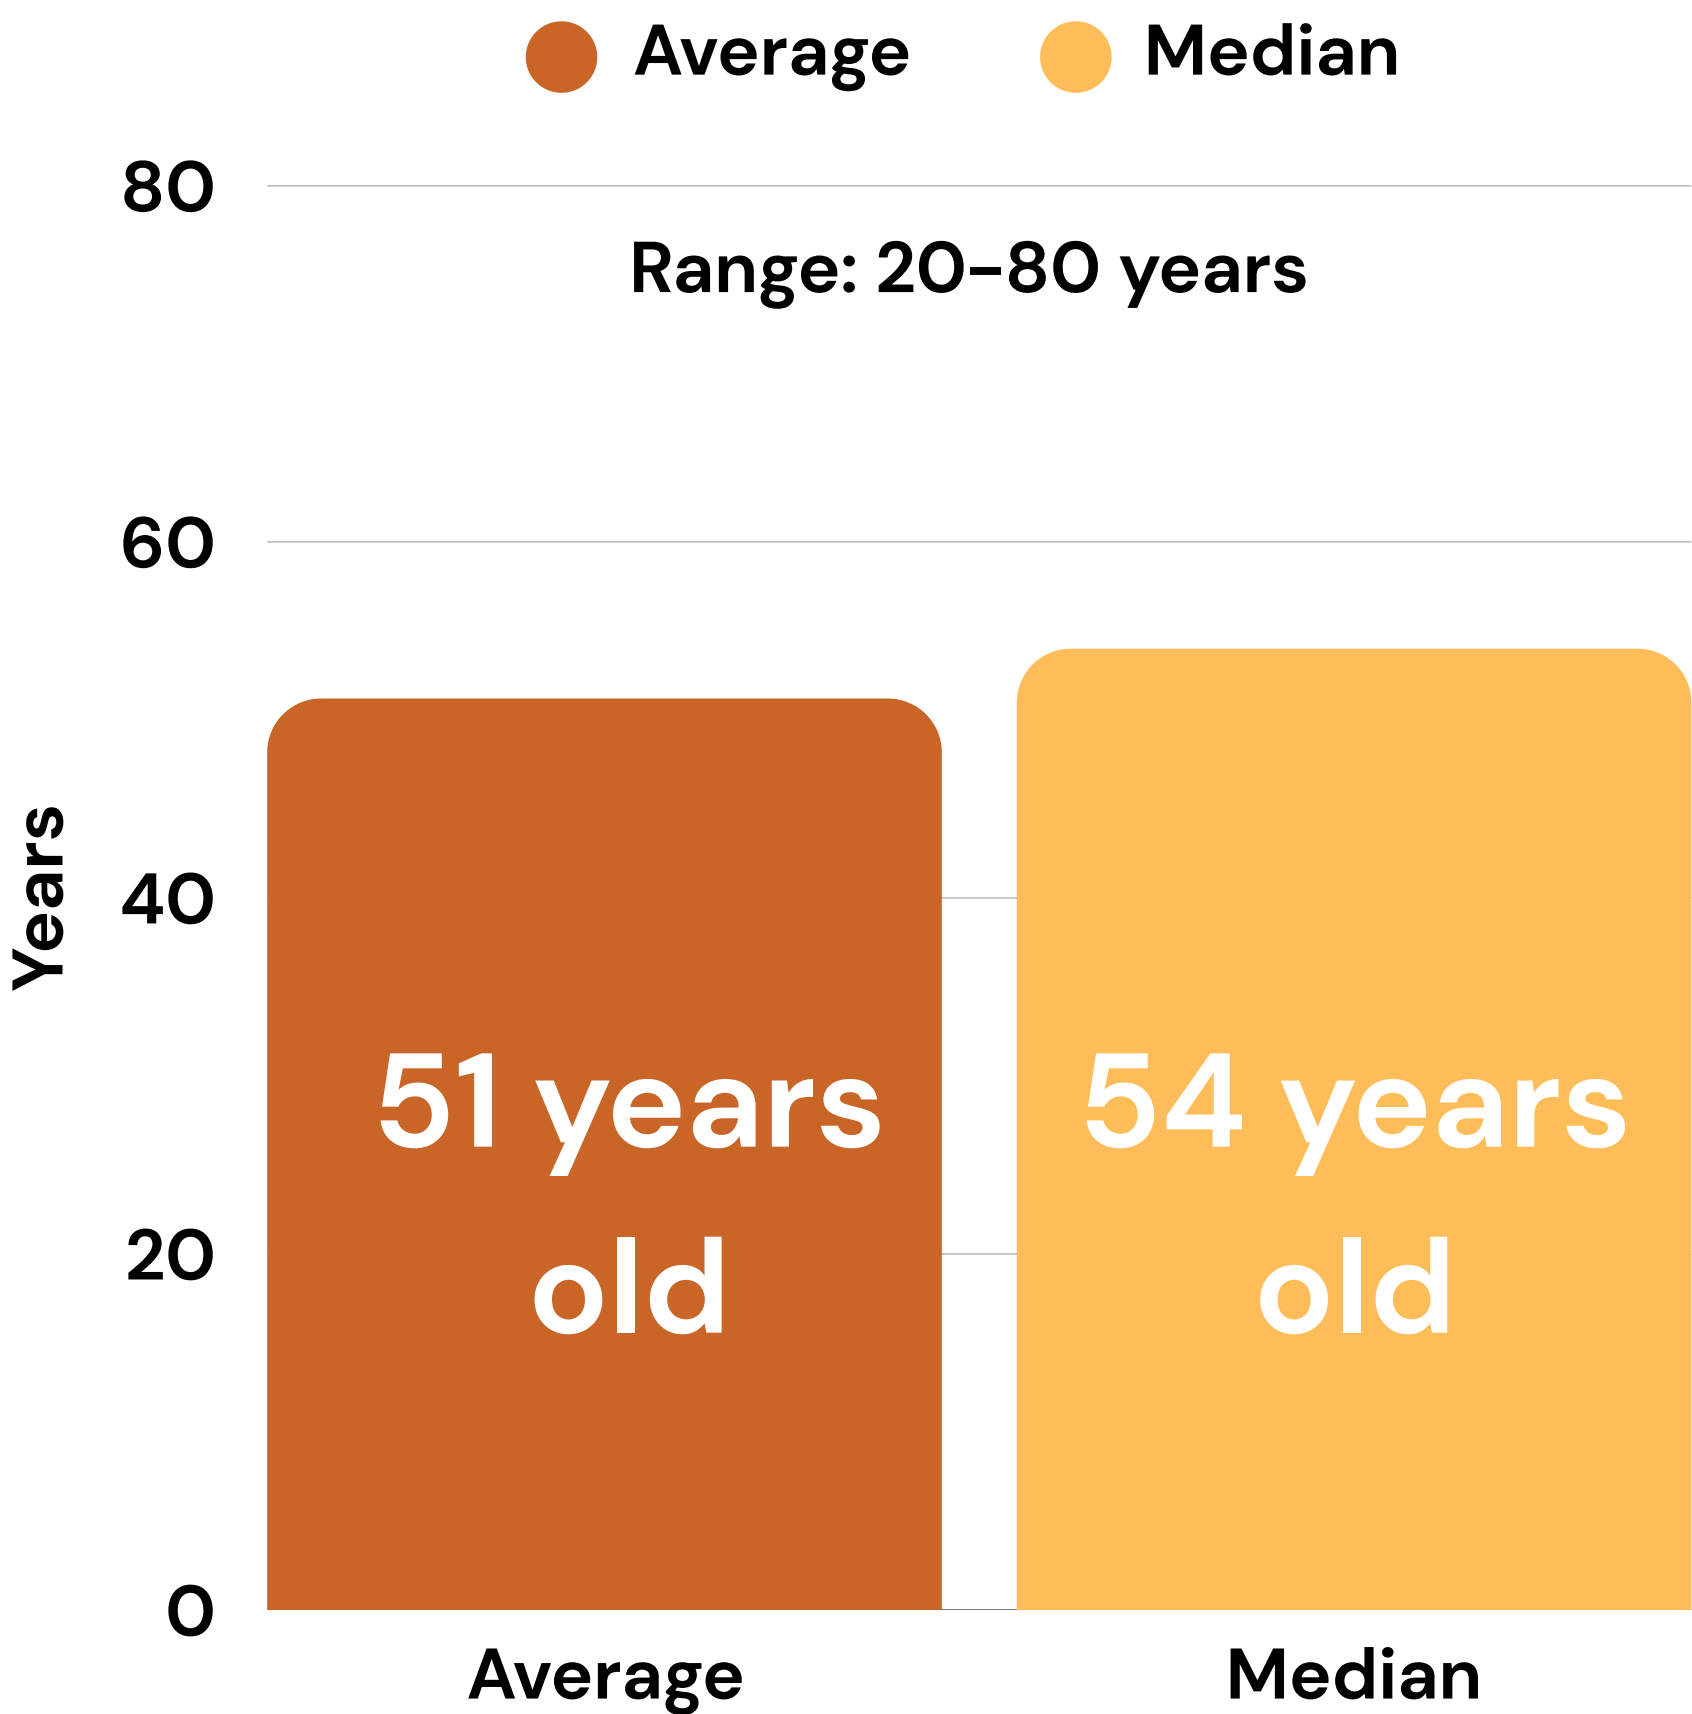

“Only a small percentage of injured workers have access to a Brain Injury Program. Our VISION is to increase access to CBIPs in the Worker’s Compensation industry by expanding geographically.”

As of November 2025, we have treated 191 patients at the Center for Brain Injury. The charts below show the distribution of patients by age and gender, helping us better understand and meet the needs of those we serve.
